

SANITATION DISTRICTS OF LOS ANGELES COUNTY

A Megawatt Made is a Million Dollars Earned: Energy Production from Digester Gas

Mark McDannel

*Los Angeles County Sanitation Districts
Energy Recovery Engineering Section*

*Innovative Energy Management Workshop
December 16, 2008*

Presentation Overview

- ⌘ Districts Energy Program
- ⌘ Technology Review
- ⌘ Capital and Operating Costs
- ⌘ Barriers to Energy Recovery
- ⌘ A paper with more details available from the speaker

Districts Energy Management Program

- ⌘ Maximum development of bio-gas resources
- ⌘ Minimize energy usage
- ⌘ Minimize procurement cost and maximize sales income
- ⌘ Demonstrate new technologies that reduce air emissions

*IC POWER ENGINE INSTALLED at
JWPCP in 1938*

Why Self Generation?

⌘ Save and Make Money

- ☐ Displace Expensive Retail Purchases
- ☐ Renewable Energy Credits Can Be Sold in 2009

⌘ Reduce Emissions

⌘ Reduce Global Warming

⌘ Increased Redundancy

- ☐ Digester Heating (Cogeneration)
- ☐ Decrease Run Hours on Standby Generators

Historical Energy Expenditures at LACSD

System Wide Wastewater Treatment Plant Power Consumption

Existing Districts Digester Gas-Fired Facilities

⌘ Boilers

- ☑ Digester Gas for Heating

⌘ Turbines

- ☑ JWPCP 22 MW (400 MGD)

⌘ Engines

- ☑ Valencia 0.4 MW (12.5 MGD)

⌘ Microturbines

- ☑ Lancaster 250 kW (10 MGD)

⌘ Fuel Cell

- ☑ Palmdale 250 kW (15 MGD)

Energy Recovery Equipment

- | | |
|--|-----------------|
| ⌘ Gas Turbines | 1 MW to 15 MW |
| ⌘ IC Engines | 25 kW to 3 MW |
| ⌘ Fuel Cells | 200 kW to 2 MW |
| ⌘ Microturbines | 30 kW to 250 kW |
| ⌘ Emerging technology-conversion of digester gas to natural gas (not covered in this presentation) | |

Gas Turbines

- ⌘ Medium to High Efficiency
- ⌘ Low Operating & Maintenance Cost
- ⌘ Higher Installed Cost
- ⌘ Excellent for Heat Recovery
- ⌘ Island Operation

JWPCP Total Energy Facility

Location - Carson, California
Combined Cycle Cogeneration
Power Plant

- ☒ Three 9 MW Solar Mars T-13000 gas turbine generators
- ☒ One 3 MW DeLaval HJT steam turbine generator
- ☒ Offsets \$15-20MM/yr in electricity purchases

IC Engines

⌘ Higher Air Emissions

⌘ SCAQMD Rule 1110.2 may kill market

⌘ High Efficiency

⌘ Inexpensive

⌘ Suppliers

⌘ Waukesha

⌘ CAT

⌘ Jenbacher

⌘ Deutz

IC Engine Cogeneration Facility at Valencia WRP

Location - Valencia, CA

- ⌘ 500 kw Cooper-Superior Model 6GTLA Engine Generator
- ⌘ Steam used to heat digesters
- ⌘ Will be shut down in 2009 due to expense of air compliance

Fuel Cells

⌘ Near Zero Air Emissions

⌘ High Efficiency

⌘ Expensive, but subsidized

☒ PUC Rebates \$4500/kW in California

⌘ Two Suppliers

☒ Fuel Cell Energy

300 kW modules

☒ UTC?

Availability unclear

Palmdale Fuel Cell Project

- ⌘ Fuel Cell Energy molten carbonate fuel cell
- ⌘ 250 kW, 47% efficiency (LHV)
- ⌘ Heat recovery to heat water for digesters
- ⌘ Combined heat and power efficiency 73%
- ⌘ Startup completed Jan 2005
- ⌘ Capital cost \$1.9 million (before 50% rebate)
- ⌘ 50% of cost recovered from SGIP

Microturbines

⌘ Low Air Emissions

⌘ Medium Efficiency – High Temperature Exhaust

⌘ Cost Effective

⌘ Two Suppliers in California

☒ Capstone

30 kW, 60 kW, 200 kW

☒ Ingersoll Rand

70 kW, 250 kW

Lancaster Microturbine Project

- ⌘ Ingersoll Rand microturbine
- ⌘ 250 kW gross, 32% efficiency (LHV)
- ⌘ Heat recovery to heat water for digesters
- ⌘ Combined heat and power efficiency 51%
- ⌘ Capital cost \$684k
- ⌘ 40% of cost recovered from California Self Generation Incentive Program (SGIP)

Calabasas Landfill Microturbine Facility- Ten Capstone 30 kW

Digester Gas Cleanup

- ⌘ Digester gas is not natural gas
- ⌘ Some technologies require removal of gas contaminants
- ⌘ Can add up to 2 cents/kWhr to O&M costs

Siloxane Removal

- ⌘ Required for fuel cells, microturbines, engines or turbines w/ NO_x or CO catalysts
- ⌘ Optional for turbines or engines w/out catalysts-cost based decision
- ⌘ Sorbents
 - ⊗ Effective
 - ⊗ Need to monitor for breakthrough and replace sorbent
- ⌘ Pressure Swing Absorption
 - ⊗ Continuous operation
 - ⊗ Requires flaring of off gas, loss of 2-8% of fuel heating value
- ⌘ Deep Chilling
 - ⊗ No longer considered commercially available

Sorbent Based Fuel Skid

Other Contaminants

- ⌘ Fuel cell requires removal of sulfur compounds, VOCs, chlorinated VOCs
- ⌘ Future application of catalysts on engines may require removal of S, Cl

Self Generation Cost Summary Comparison

	Installed Cost (\$/kW)	Operating Cost (\$/kWh)	Power Production Cost* (\$/kWh)
Gas Turbines	\$2,000	\$0.010	\$0.04
IC Engines	\$1,700	\$0.015	\$0.04
Microturbines	\$3,000	\$0.016	\$0.06
Fuel Cell	\$8,500	\$0.035	\$0.16

*10 year write down @5%

Challenges

⌘ Many technologies are new

- ☐ Track record
- ☐ Number of suppliers
- ☐ Experience and resources of some suppliers

⌘ Institutional barriers

- ☐ Air agencies
- ☐ Electric utilities
